Jacob's Journey
his wish to walk

"Having been born prematurely, at 18 months old Jacob was diagnosed with Spastic Diplegic Cerebral Palsy, affecting both his legs. Due to the stiffness in his legs we have been told Jacob will not walk without SDR surgery. Jacob's journey – his wish to walk was set up to fundraise the £65,000 in order for Jacob to fly to the USA and have pioneering SDR surgery and two years of subsequent physiotherapy in the UK. As a parent it is heart-breaking to have to sit back and watch your very bright, smiley little boy struggle to get around, when all he wants to do is walk. It would mean the absolute world to us to one day watch him take his first steps."

Nicola Baird (Jacob's mum)
